

EOLE® Fresh

EOLE® Fresh set new standards for home textile products with smart textiles.

Three technologies designed to act naturally on your customers' thermal comfort, night after night.

EOLE® Fresh Temp naturally regulates body temperature. Thanks to microcapsules of PCM (Phase Change Material), the fabric absorbs or releases heat according to the user's needs, ensuring optimal sleeping comfort.

EOLE® Fresh Ice provides an instant sensation of freshness on contact with the skin. This innovative fabric quickly absorbs body heat, without any chemical treatment.

EOLE® Fresh Dry evaporates body moisture rapidly. This hydrophilic fabric is breathable, fresher and easier to care for.
